One of the bolts is on a bracket that holds some electrical wires out of the way, it is easiest to remove this and make it easier to remove the pump.. This power brake system receives hydraulic pressure from the power steering pump instead of vacuum pressure from the inlet manifold like most gasoline engine braking systems.

On the 620hp solid-scooter 427ci small block Chevy in Laguna, we get nearly 8 inch vacuum, and our vacuum booster seems quite pleased with it.
